DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 22-26 and 28-31, are rejected under 35 U.S.C. 102(b) as being anticipated by Walker (US 5,788,510 and Examiner's Attachment from previous office action).

Regarding claims 22-26 and 28, Walker disclose an electrical connector (20), comprising:
a dielectric housing (30) including a peripheral wall surrounding a rising above an array of contact receiving passageways (56) and having a perimeter edge (32);
a plurality of separate surface mount contacts (58);
area of reduced rigidity (E1) in portion of the peripheral wall (see Figure 1).

Walker silently about the reduced rigidity area at which stress is built up is for preventing warpage problem of the housing. However, this feature is seen to be an inherent teaching of that device since a means of the removed portion of the peripheral wall is disclosed, and it is apparent that some type of warpage prevention must be presented in order for the device to function as intended.

Regarding claims 29-31, the method claims are deemed inherited.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Walker (US 5,788,510).

Walker substantially disclose the claimed invention except the mount contacts comprise solder balls. It would have been obvious to one having ordinary skill in the art at the time the invention was made to not having a solder ball in the connector, since it has been held that omission of an element and its function in a combination where the remaining elements perform the same functions as before involves only routine skill in the art. *In re Karlon*, 136 USPQ 184.

Response to Arguments

Applicant's arguments regarding the claims 22-31 are moot since the prior art has been applied differently to the claims.
